Michigan Department of Natural Resources

MICHIGAN DEER HARVEST SURVEY REPORT 2010 SEASONS

Brian J. Frawley

ABSTRACT

A survey of deer hunters was conducted following the 2010 hunting seasons to estimate hunter participation, harvest, and hunting effort. In 2010, an estimated 656,500 hunters spent 9.6 million days afield. Statewide, the number of people hunting deer decreased 4%, and their hunting effort decreased 6% between 2009 and 2010. Hunters harvested nearly 418,000 deer, a decrease of about 6% from the number taken in 2009. Statewide, 44% of hunters harvested a deer in 2010, while hunter success was 43% in 2009. About 23% of the hunters took an antlerless deer and 29% took an antlered buck in 2010. About 15% of deer hunters harvested two or more deer. Statewide, less than 45% of hunters were satisfied with numbers of deer seen, bucks seen, deer taken, and their overall hunting experience in 2010. However, satisfaction levels increased statewide between 2009 and 2010. About 90,600 hunters used a crossbow during the 2010 archery season, and they harvested about 38,000 deer with the crossbow. About 50% of deer hunters statewide supported antler point restrictions on buck harvest in the Upper Peninsula (UP), and 59% of the hunters that preferred to hunt in the UP supported these restrictions in 2010. About 40% of deer hunters statewide supported antler point restrictions on buck harvest in Deer Management Unit (DMU) 487, and 42% of the hunters that preferred to hunt in the northeast Lower Peninsula (LP) supported these restrictions in 2010.

INTRODUCTION

The Natural Resources Commission (NRC) and Michigan Department of Natural Resources (DNR) have the authority and responsibility to protect and manage the wildlife resources of the state of Michigan. Harvest surveys are one of the management tools used to accomplish this statutory responsibility. Estimating hunter participation, harvest, and hunting effort (hereafter referred to as estimates) are the primary objectives of these surveys. Estimates

derived from harvest surveys as well as information from deer harvest check stations, deer pellet group surveys, trends in deer-vehicle collisions, population modeling, and input received from the public are used to monitor deer populations and establish harvest regulations.

Estimating harvest, hunter numbers, and hunting effort were the primary objectives of the deer harvest survey. This survey also provided an opportunity to collect information about management issues. Questions were added to the questionnaire to investigate hunter satisfaction with the 2010 hunting season and deer numbers. Deer hunters were also asked whether they supported the antler point restrictions that were enacted in the UP and Deer Management Unit (DMU) 487 (northeast LP), and questions were added to investigate whether these restrictions had influenced deer hunting activity (hunting effort, harvest, and satisfaction).

During 2010, white-tailed deer (*Odocoileus virginianus*) could be harvested primarily during the following hunting seasons: early youth antlerless, youth, archery, regular firearm, muzzleloader, early antlerless, late antlerless, and special hunts for disabled hunters. In order to harvest a deer, hunters had to possess a hunting license (firearm, archery, combination, or antlerless license) (Table 1).

A harvest tag was issued as part of the hunting license. Hunters could purchase a maximum of two licenses for taking an antlered deer (either one combination license or both a firearm and an archery license). Archery and firearm licenses included one harvest tag, while the combination license had two harvest tags. A firearm license allowed a person to take one deer with at least one antler three inches or longer, except in DMU 487 where it could also be used to take an antlerless deer in the firearm and muzzleloader seasons (Table 1). An archery license allowed an individual to take one deer of either sex. A person with a combination license could take two deer of either sex during the archery season, two antlered deer during the firearm season, or one antlered deer during each season, except in DMU 487 where it could also be used to take two antlerless deer in the firearm and muzzleloader seasons (Table 1). If two antlered deer were taken, regardless of type of license, one needed to have at least one antler with four or more points (qualifying points must be at least one inch).

New antler point restrictions were adopted in 2008 for the taking of antlered deer (bucks) in the UP. Under this regulation, the regular buck tag of a combination deer license could only be used to tag a buck with at least three antler points on one side. The restricted tag could only be placed on a buck with a minimum of four points on one side. Hunters who chose not to purchase the combination tag were restricted to one buck only (without any antler point restrictions) in the UP, all seasons combined, even if they purchased both archery and firearms licenses.

The same antler point restrictions that were adopted in the UP in 2008 were implemented in DMU 487 in the northeast LP in 2010. In addition, hunters in DMU 487 could use a firearm license or one or both combination license tags to take an antlerless deer during the firearm

or muzzleloader seasons. Deer Management Unit 487 included Alcona, Alpena, Iosco, Montmorency, Oscoda, and Presque Isle counties.

Antlerless licenses could be purchased in addition to archery, firearm, or combination licenses. Antlerless deer licenses allowed hunters to take deer without antlers or with antlers shorter than three inches during any season with equipment appropriate for the season. Use of each antlerless license was restricted to a single DMU designated at the time of purchase. Antlerless licenses were available for most of the state, except in seventeen DMUs (007, 017, 021, 027, 031, 036, 042, 048, 066, 121, 127, 131, 149, 152, 249, 252, and 349) in the UP and three DMUs (016, 040, and 069) in the LP. Antlerless licenses were issued specifically for either public or private lands. Public land antlerless licenses were not available in all DMUs that had private land licenses. The number of licenses available in DMUs open to antlerless deer hunting was established by the NRC (Appendix A).

A limited number of antlerless deer hunting licenses were available for many DMUs for private and public land hunting (Appendix A). Hunters could apply for an antlerless license through the drawing, purchase a private land license for selected areas without application, or wait to purchase a leftover license after the drawing, if available.

A private land antlerless deer hunting license was valid for taking antlerless deer only from privately-owned lands within the DMU specified on the license with permission of the landowner. A private land license was not valid on land enrolled in the Commercial Forest Act program (Commercial Forest Lands). Hunters were limited to a maximum of five private land antlerless deer licenses, except for DMUs 041, 486, and 487 where there was no seasonal limit. In addition, there was no seasonal limit for the number of public land antlerless licenses that could be purchased. Furthermore, hunters could purchase two private land antlerless deer license each day, except in for private land antlerless licenses for DMUs 041, 486, and 487 and public land antlerless licenses for DMUs 041 and 452 where hunters could purchase five licenses each day.

Two new private land DMUs were created in 2009 to aid in the harvest of antlerless deer. Deer Management Unit 486 was a multi-county DMU in the southern LP. Deer Management Unit 486 included private land in DMUs 003, 008, 009, 011, 012, 013, 014, 019, 023, 025, 029, 030, 032, 033, 034, 037, 038, 039, 044, 046, 047, 054, 056, 059, 061, 063, 070, 073, 075, 076, 078, 079, 080, 081, 162 and 173. A private land antlerless deer license for DMU 486 was valid on private land within any of these subunits. DMU 487 was the second new multi-county DMU and was located in the northeast LP. Deer Management Unit 487 included private land in DMUs 001, 004, 035, 060, 068, 071, 135 and 452. A private land antlerless deer license for DMU 487 was valid on private land within any of the eight subunits.

A public land antlerless deer hunting license allowed an individual to hunt for antlerless deer upon publicly-owned lands (including state, federal, and county lands) open to hunting and Commercial Forest Lands within the DMU for which it was issued. A public land license was invalid on any privately-owned lands except Commercial Forest Lands.

The Pure Michigan Hunt (PMH) was a unique multi-species hunting opportunity offered for the first time in 2010. Individuals could purchase an unlimited number of applications for the PMH. Three individuals were randomly chosen from all applications, and winners received elk, bear, spring turkey, fall turkey, and antlerless deer hunting licenses and could participate in a reserved waterfowl hunt on a managed waterfowl area. The antlerless deer hunting license was valid for all areas open for hunting antlerless deer and during all deer hunting seasons in which they were eligible to participate.

Deer Management Assistance (DMA) permits were special antlerless permits issued to landowners where the number of antlerless licenses was insufficient to meet the objective of specific landowners (e.g., controlling disease, crop damage, or deer abundance). These permits allowed hunters to take one antlerless deer per permit during any deer season on the land where issued or adjacent private lands with the landowner's permission. To use these permits, the hunter also must have purchased a valid deer hunting license for the season in which they were hunting and abide by all other hunting regulations.

Managed Deer Hunt permits were antlerless permits that could be used during special seasons on some public lands (e.g., state parks, state wildlife areas, and some federal land). These permits were issued by special random drawings. To use these permits, the hunter also must have purchased a valid deer hunting license and abide by all other hunting regulations.

A new youth early antierless firearm hunting season in DMU 041 and DMU 486 was created in 2010. This season occurred September 21-24, and was open on all lands within these DMUs with the appropriate public or private-land antierless license or DMA permit.

The youth firearm season was held during September 25-26 on public and private lands statewide. Youths 10-16 years of age could take one deer of either sex using a firearm license or combination license. Only an antlerless deer could be taken with an antlerless license or DMA permit. Youths participating during this season had to be accompanied by an adult at least 18 years old. Youths 10 and 11 years of age were restricted to archery-only equipment. Youths 12 and 13 years of age could use archery equipment or firearms but firearm hunting was restricted to only private land. Youth hunters could take no more than one deer during the season.

The archery season occurred statewide on public and private lands. This season was divided into an early and late season (October 1 through November 14 and December 1, 2010, through January 1, 2011). Archery licenses, antlerless licenses, combination licenses, and DMA permits could be used to take deer during the archery seasons using archery equipment.

Deer could also be taken during the special disabled firearm hunt October 14-17, 2010. Hunters could take deer on private lands or public lands requiring an access permit. Only hunters that were issued a permit to hunt from a standing vehicle; veterans with 100% disability as defined by the United States Department of Veterans Affairs, and legally blind

people could participate in this season. A veteran with 100% disability also could take a deer during the youth firearm season (September 25-26).

The statewide regular firearm season occurred November 15-30. The muzzleloader season was held December 3-12 in the UP, December 10-19 in the northern LP, and December 3-19 in the southern LP. Hunters were allowed to take deer on both public and private lands with firearm and combination deer hunting licenses during the regular firearm and muzzleloader seasons. Antlerless licenses (including DMA permits) also could be used during the firearm seasons.

The early antlerless firearm season occurred from September 16-20. Hunters pursuing deer during this season had to have purchased an antlerless license and possess an unused antlerless harvest tag (including DMA permits) and were limited to hunting on private land. The area open to hunting during the early antlerless season was limited to all or portions of 50 counties in the LP (Alcona, Allegan, Alpena, Antrim, Arenac, Barry, Bay, Berrien, Branch, Calhoun, Cass, Charlevoix, Clinton, Eaton, Genesee, Gratiot, Hillsdale, Huron, Ingham, Ionia, Iosco, Isabella, Jackson, Kalamazoo, Kent, Lapeer, Lenawee, Livingston, Macomb, Mecosta, Midland, Monroe, Montcalm, Montmorency, Muskegon, Newaygo, Oakland, Oceana, Oscoda, Ottawa, Presque Isle, Saginaw, St. Clair, St. Joseph, Sanilac, Shiawassee, Tuscola, Van Buren, Washtenaw, and Wayne). Three additional counties (Antrim, Charlevoix, and Oceana) were open to hunting during the early antlerless firearm season than in 2009.

The late antlerless firearm season occurred from December 20, 2010, through January 1, 2011. Hunters pursuing deer during this season had to have purchased an antlerless license and possess an unused antlerless harvest tag (including DMA permits) and were limited to hunting on private land. The area open to hunting during the late antlerless season was expanded from 44 counties in 2009 to 50 counties in 2010. Six additional counties (Antrim, Charlevoix, Macomb, Monroe, St. Clair, and Wayne) were open to hunting during the late antlerless firearm season than in 2009. All counties open during the early antlerless firearm season were also open for the late antlerless firearm season.

The minimum age requirement for using a crossbow to hunt deer was lowered from 12 to 10 years of age statewide in 2010. In addition, crossbows were legal to use during all archery and firearm seasons statewide, except in the UP, where crossbow use was prohibited during the late archery and muzzleloader seasons, unless the hunter was disabled. Hunters using a crossbow were required to obtain a free crossbow stamp, except hunters with a disability already hunting under a DNR-issued crossbow permit, did not need the stamp.

METHODS

The Wildlife Division provided all hunters the option to report information about their deer hunting activity voluntarily via the Internet. This option was advertised through the hunting regulation booklet (digest) and on the DNR website, and an email message was sent to all license buyers that had provided an email address to the DNR. Hunters reported whether they hunted, the days spent afield, and whether they harvested a deer. Deer hunters were also asked whether they supported the antler point restrictions in the UP and DMU 487. Following the 2010 deer hunting seasons, a questionnaire was sent to 51,348 randomly selected individuals who had purchased a hunting license (firearm, archery, antlerless, or combination deer hunting licenses) and had not already voluntarily reported harvest information via the Internet. Hunters receiving the questionnaire were asked the same questions as asked via the internet. Hunters were instructed not to report hunting effort and harvest associated with DMA permits because landowners obtaining these permits already were required to report the number of deer harvested to the DNR.

Estimates were based primarily on information collected from random samples of hunting license buyers. Thus, these estimates were subject to sampling errors (Cochran 1977). Estimates were calculated using a stratified random sampling design (Cochran 1977) and were presented along with their 95% confidence limit (CL). In theory, this CL can be added and subtracted from the estimate to calculate the 95% confidence interval. The confidence interval is a measure of the precision associated with the estimate and implies the true value would be within this interval 95 times out of 100. Unfortunately, there are several other possible sources of error in surveys that are probably more serious than theoretical calculations of sampling error. They include failure of participants to provide answers (nonresponse bias), question wording, and question order. It is very difficult to measure these biases.

License buyers were assigned to one of five groups (strata) based on the type of license purchased and season that it was valid. The first stratum consisted of people eligible only for the archery, regular firearm, and muzzleloader hunting seasons (N = 421,920). The second stratum consisted of people eligible to hunt during archery, regular firearm, muzzleloader, early antlerless, and late antlerless seasons (N = 233,751). The third stratum consisted of people eligible to hunt during archery, regular firearm, muzzleloader, late antlerless, and youth seasons (N = 37.971). The fourth stratum consisted of 1.184 people that were eligible to participate in the special disabled hunts. (Disabled hunters were not required to purchase a unique type of hunting license; however, disabled hunters younger than 65 years were sold a discounted hunting license [i.e., sold a senior hunting license]). The fifth stratum consisted of 2,703 people that had voluntarily reported information about their hunting activity via the Internet before the random sample was selected. The random sample consisted of 27,988 people from the first stratum, 15,305 from the second stratum, 6,871 from the third stratum, and 1,184 from the fourth stratum. The stratified sampling design accounted for the varying probabilities of being selected from the strata so estimates could be reliably extrapolated from the sample to all license buyers.

Estimates were calculated separately by the area where the hunt occurred. The state was divided into eight areas that closely matched the DNR's wildlife management administrative units (Figure 1). The state was also divided into three ecological regions (UP, northern LP, and southern LP). These regions generally matched major ecoregions (Albert 1995), except in the UP where two ecoregions were combined. Ecoregions are regions having similar soils, vegetation, climate, geology, and physiography. Estimates were also calculated for each DMU (Figure 2, Appendix B). Deer harvested from unknown locations were allocated among areas in proportion to the known harvest.

Statistical tests are used routinely to determine the likelihood that the differences among estimates are larger than expected by chance alone. The overlap of 95% confidence intervals was used to determine whether estimates differed. Non-overlapping 95% confidence intervals was equivalent to stating that the difference between the means was larger than would be expected 995 out of 1,000 times, if the study had been repeated (Payton et al. 2003).

Questionnaires were initially mailed during mid-January 2010, and two follow-up questionnaires were mailed to nonrespondents. To increase the number of questionnaires returned, respondents that returned their questionnaire promptly were eligible to win a prize of a firearm or bow. Although 51,348 people were sent the questionnaire, 1,249 surveys were undeliverable resulting in an adjusted sample size of 50,099. Questionnaires were returned by 28,345 of people receiving the questionnaire (57% response rate).

Estimates of harvest, hunting effort, and hunter participation are affected by the willingness of people to complete and return their questionnaires. This problem can confound comparisons of estimates made between years if response rates vary greatly. The percentage of people returning their questionnaire this year was lower than some previous years. To reduce bias caused by this lower response rate, an adjustment was made on the 2010 estimates to make them comparable to the 2009 estimates (74% response rate). Estimates of harvest, hunting effort, and hunter numbers were reduced by 4.4, 3.3, and 1.4%, respectively, to make estimates comparable to 2009. These reductions reflected the average decline noted between estimates calculated when 57 and 74% of the responses were used in 2000 and 2001 surveys.

RESULTS

In 2010, 697,529 people purchased a license to hunt deer in Michigan. The number of people buying a license in 2010 declined by nearly 4% from 2009 (725,190 people purchased a license in 2009). Most of the people buying a license were male (91%), and the average age of license buyers was 43 years (Figure 3). Nearly 9% (63,911) of the license buyers were younger than 17 years old. About 1% (6,686) of the license buyers were younger than 12 years old, which represented 11% of the hunters younger than 17 years old.

The number of 2010 deer harvest tags sold for all license types combined decreased nearly 4% from 2009 (Table 2). License buyers were issued an average of 2.2 harvest tags. About 88% of the license buyers obtained three or fewer harvest tags, and greater than 98% had five or fewer harvest tags (Figure 4). Hunters most frequently obtained antlerless and combination harvest tags (Figure 5). About 46% of the license buyers purchased at least one antlerless license (322,618 people), and greater than 98% of antlerless license buyers purchased three or fewer antlerless licenses, public and private licenses combined (Figure 6).

The antlerless license quota on private lands increased 7% from 659,800 in 2009 to 704,400 licenses in 2010 (Appendix A). The quota for public land antlerless licenses increased 6% from 68,300 to 72,100 between 2009 and 2010. Although the 2010 antlerless quota

increased 7% from 2009, the number of antlerless licenses sold declined 6% between 2009 and 2010 (Table 2).

About $94.1 \pm 0.2\%$ (656,501 hunters) of the people buying a license in 2010 actually spent time hunting deer (Table 3). Most hunters (593,074) pursued deer during the regular firearm season (Figure 7). Statewide, the number of people hunting deer during all seasons combined decreased 4% from 2009.

Significantly fewer people hunted during the youth (-15%), late antlerless (-11%), early antlerless (-9%), muzzleloader (-9%), and regular firearm (-6%) seasons (Table 3). The number of people hunting in the archery and disabled seasons were nearly unchanged between 2009 and 2010. The creation of the early youth antlerless season in 2010 probably reduced participation during the regular youth season. Participation in the early and late antlerless seasons declined despite addition area opened for hunting and an increased quota of antlerless licenses. Hunting regulation changes allowing increased use of crossbows during the archery season probably helped maintain archer numbers between 2009 and 2010, but may have contributed to reduced participation in other seasons in 2010.

About 45% of the days hunters spent pursuing deer throughout the state occurred in the archery season (Figure 9). About 41% of the hunting effort occurred during the regular firearm season. Nearly 13% of the hunting effort occurred in the muzzleloader and late antlerless seasons combined. Statewide, hunters devoted an average of 15.3 days afield hunting deer during all seasons combined (Table 4). Archers had the greatest number of days available to hunt deer (77 days) and devoted the greatest number of days afield ($\bar{x} = 14.5$ days/hunter) (Figure 10, Table 4). For all seasons combined, hunting effort statewide decreased 6% between 2009 and 2010 (Table 3). Hunting effort decreased significantly during the youth (-17%), early antlerless (-13%), late antlerless (-10%), muzzleloader (-11%) and regular firearm (-9%) seasons. Hunting effort was unchanged during the archery and disabled seasons between 2009 and 2010.

Nearly 418,000 deer were harvested in 2010, a decrease of about 6% from the number taken in 2009 (Figure 11, Tables 5-6). Statewide, the harvest of antlered deer in 2010 was nearly unchanged from 2009, but harvest of antlerless deer decreased 10% (Table 5). Between 2009 and 2010, deer harvest increased significantly during the late antlerless (30%) and archery (11%) seasons. While harvest decreased significantly in the regular firearm season by 20%. Deer harvest during the regular firearm season may have been reduced partly because the season opened on a Monday, rather than a weekend opener in 2009. Deer harvest in the muzzleloader, early antlerless, youth, and disabled seasons did not change significantly between 2009 and 2010.

About 54% of the deer harvested (sexes combined) in 2010 were taken during the regular firearm season (Figure 13). Nearly 46% of the antlerless deer and 61% of the antlered bucks were harvested in the regular firearm season. Hunters took 28% of the harvested deer (sexes combined) during archery season. During the archery season, hunters took 27% of the antlerless deer and 31% of the antlered bucks harvested. Few antlered bucks (6%) were

taken in the muzzleloader season. The early and late antierless and muzzleloader seasons combined accounted for about 26% of the antierless deer harvested.

About 89% of the animals harvested (sexes combined) in 2010 were taken on private lands (Table 7). Statewide, most of the antlerless deer (91%) and antlered bucks (87%) were harvested on private lands. Some noteworthy changes between 2009 and 2010 included increased harvest of antlered bucks on both public and private lands in the UP, decreased take of antlered bucks on private land in the northern LP, and decreased take of antlerless deer on private land in the LP.

Statewide, 44% of the deer hunters harvested at least one deer (all deer seasons and sexes combined) in 2010 (Figure 14, Table 8), compared to 43% success in 2009. About 23% of the hunters took an antlerless deer, and 29% took an antlered buck in 2010. About 15% of deer hunters harvested two or more deer.

Hunters were most successful in taking a deer during the youth (33% successful), regular firearm (32%), and archery (32%) seasons (Figure 15, Table 9). Nearly 22% of the hunters took an antlered buck and 14% harvested an antlerless deer during the regular firearm season. Hunter success was lowest in the muzzleloader (19%), disabled hunter (19%), and early youth antlerless (16%) seasons.

Deer hunters were asked to report how satisfied they were with (1) number of deer seen, (2) number of antlered deer [bucks] seen, (3) number of deer taken, and (4) their overall hunting experience. Statewide, less than 45% of hunters were satisfied with numbers of deer seen, bucks seen, deer taken, and their overall hunting experience in 2010 (Tables 10-11). Satisfaction increased statewide for all measures between 2009 and 2010. Highest levels of satisfaction were reported among hunters in the southern LP.

Statewide, about 50% of hunters supported the antler point restrictions on buck harvest implemented for the UP (Table 12), and about 59% of the hunters that preferred to hunt in the UP supported the antler point restrictions. Statewide support for the antler point restrictions increased significantly between 2009 and 2010.

Statewide, about 40% of hunters supported the antler point restrictions on buck harvest implemented for the DMU 487 (Table 13), and about 42% of the hunters that preferred to hunt in the northeast LP supported the antler point restrictions.

About 90,615 hunters used a crossbow during the archery season, and they harvested about 38,310 deer with the crossbow (Tables 14-16). About 36% of these archers using a crossbow harvested a deer with a crossbow. Hunters using a crossbow to hunt deer were required to obtain a crossbow stamp, unless they were a disabled hunter that already had a DNR-issued crossbow permit. About $58 \pm 2\%$ of the archers using a crossbow during the archery season had obtained the required crossbow stamp.

ACKNOWLEDGEMENTS

I thank all the deer hunters that provided information. Autumn Feldpausch, Jamie Fuller, Anna Hamilton, Hannah Hjelsand, Sheree Kershaw, Dolores Reid, and Theresa Riebow completed data entry. Greg Bird updated the internet harvest reporting application. The figure of DMUs was prepared by Marshall Strong. Valerie Frawley, Cheryl Nelson, and Brent Rudolph reviewed a previous version of this report.

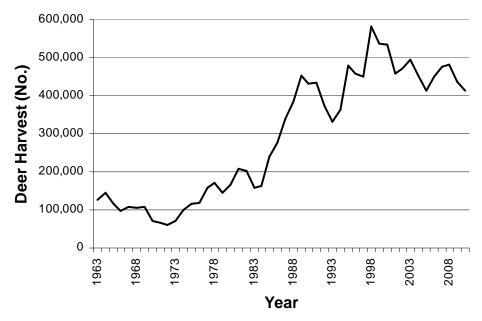

Figure 11. Number of deer harvested in Michigan's hunting seasons, 1963-2010. Harvest from all seasons and for all deer sexes was combined.

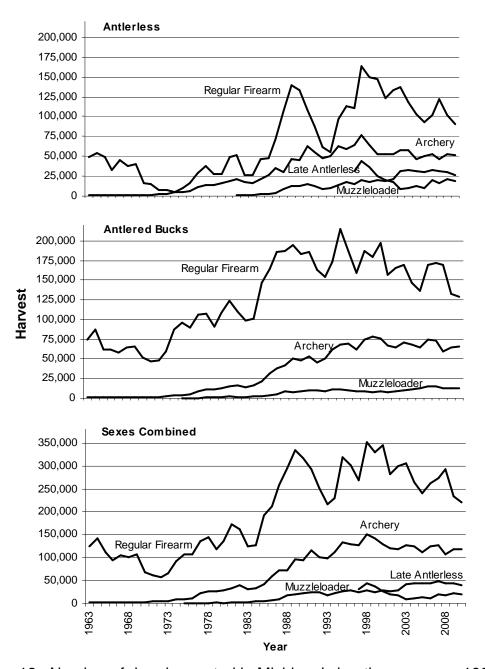

Figure 12. Number of deer harvested in Michigan's hunting seasons, 1963-2010. Harvests for early antlerless, youth, and special disabled hunter seasons were not shown.

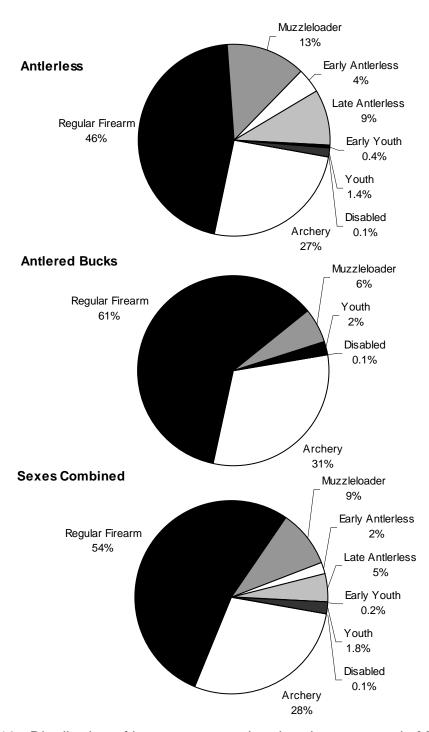

Figure 13. Distribution of harvest among deer hunting seasons in Michigan, 2010. Antlered deer had antlers at least 3 inches in length; antlerless deer included deer without antlers and deer with antlers less than 3 inches in length.

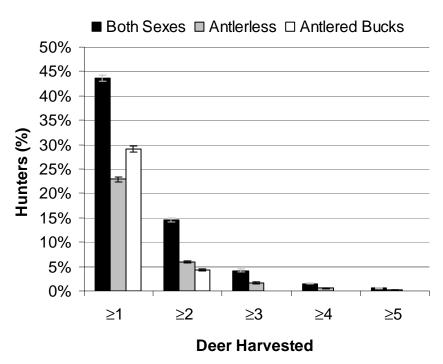

Figure 14. Percentage of hunters harvesting a deer in Michigan, 2010. Error bars represent the 95% CLs.

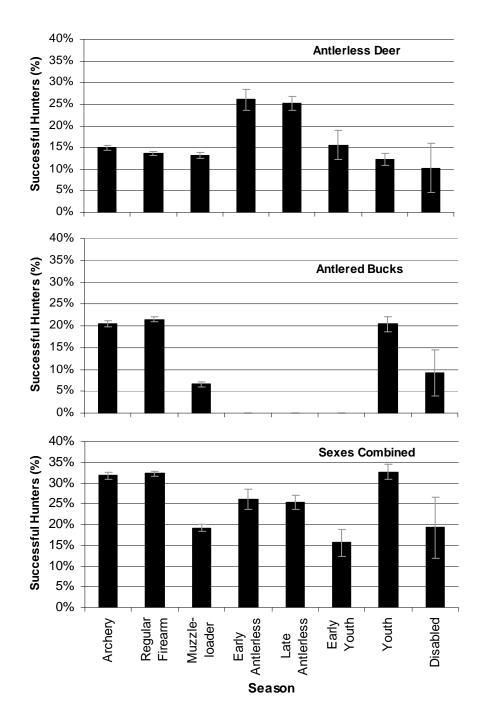

Figure 15. Percentage of hunters harvesting a deer in Michigan's deer hunting seasons, 2010. Error bars represent the 95% CLs. Antlered deer had antlers at least 3 inches in length; antlerless deer included deer without antlers and deer with antlers less than 3 inches in length.

Table 1. Kind of deer that could be taken during the 2010 Michigan deer hunting seasons for each combination of season and hunting license.

Type of license (harvest tag) or permit	Season	Kind of deer that could be harvested ^a
Archery License	Archery seasons	Antlerless or antlered deerb
Firearm License	Regular Firearm, or Muzzleloader seasons	Antlered deer statewide and antlerless deer in DMU 487 ^b
Firearm License	Youth and 100% disabled veteran hunt ^c	Antlerless or antlered deer
Combination Licensed (Regular harvest tag)	Archery season	Antlerless or antlered deer
Combination Licensed (Regular harvest tag)	Regular Firearm, or Muzzleloader seasons	Antlered deer statewide and antlerless deer in DMU 487
Combination Licensed (Regular harvest tag)	Youth and 100% disabled veteran hunt	Antlerless or antlered deer
Combination Licensed (Restricted harvest tag)	Archery seasons	Antlerless deer or a deer that has at least 1 antler with 4 or more antler points, 1 or more inches in length
Combination Licensed (Restricted harvest tag)	Regular Firearm, Youth, or Muzzleloader seasons	A deer that has at least 1 antler with 4 or more antler points (1 or more inches in length) or an antlerless deer in DMU 487
Combination Licensed (Restricted harvest tag)	Youth and 100% disabled veteran hunt	Antlerless or antlered deer which has at least 1 antler with 4 or more antler points 1 or more inches in length
Antlerless Licensee	All seasons	Antlerless deer only
Deer Management Assistance (DMA) permit ^f	All seasons	Antlerless deer only
Managed Deer Hunt permitg	Specified season	Antlerless deer only

^aAntlered deer had antlers at least 3 inches in length; antlerless deer included deer without antlers and deer with antlers less than 3 inches in length. Hunters could harvest a maximum of 2 antlered deer per year (all seasons combined).

blf a person took 2 antlered deer during all seasons combined, one of the antlered deer must have had at least 1 antler with 4 or more antler points, each point being 1 or more inches in length.

All youths 10 and 11 years of age were restricted to archery-only hunting. Hunters could harvest only 1 deer in the youth and 100% disabled veterans season.

dCombination licenses included two harvest tags (i.e., regular and restricted harvest tags).

^eAlthough antlerless licenses were only valid for taking an antlerless deer, a person with a valid antlerless deer hunting license that killed a male deer with antlers less than 3 inches in length can choose to tag the male deer with any deer hunting license (firearm, archery or either combination license).

Permits issued to landowners in areas where the number of antlerless licenses was insufficient to meet the objective of specific landowners (i.e., controlling disease or the deer population). To use these permits, the hunter must also have purchased a firearm, archery, combination, or antlerless deer license for the season in which they were hunting.

⁹Permits for special hunts on designated public lands (e.g., some state parks, game areas, and federal property). These permits valid only during specific dates, which varied among areas. Permits issued to applicants using a lottery (i.e., random selection). To use these permits, the hunter must also have purchased a valid deer hunting license.

Table 2. Number of Michigan deer licenses purchased and harvest tags issued, 2008-2010.

^aNew antler point restrictions were adopted in 2010 for the taking of antlered deer (bucks) in DMU 487. Under this new regulation, the regular buck tag of a combination deer license could only be used to tag a buck with at least three antler points on one side. The restricted tag could only be used on a buck with at least four points on one side. Hunters who chose not to purchase the combination tag were restricted to one buck (with no additional point restrictions) in the UP, all seasons combined, even if they purchased an archery and firearms license. In addition, hunters in DMU 487 could use a firearm license or one or both combination license tags for antlerless deer during the firearm or muzzleloader seasons. DMU 487 included Alcona, Alpena, Iosco, Montmorency, Oscoda, and Presque Isle counties.

^bGroup supporting restrictions included hunters reporting they "strongly supported" or "supported."

^cGroup opposing restrictions included hunters reporting they "opposed" or "strongly opposed."

^d95% confidence limit. Excluded people that did not hunt.

^aSee Figure 2 for the locations of DMUs. ^bNumber of licenses sold could exceed the quota because junior licenses do not count towards the quota.

^cNumber of license buyers does not add up to statewide total because hunters could purchase licenses in more than one DMU.

dSpecial deer hunts on public land. Licenses for these DMUs were available on a local basis.

Appendix B. Estimated number of deer hunters, hunting effort, and deer harvested in Michigan during 2010, summarized by Deer Management Unit.
